ABOUT US

Since 1963, we've been engineering and manufacturing germicidal ultraviolet equipment to prevent disease caused by contaminants in water, in air, and on surfaces. Our engineers bring each concept to a finished model, implementing stringent quality control procedures. Each product is manufactured with stainless steel and the highest quality materials to ensure the safety of personnel and room occupants. We stock an extensive inventory in our 37,500 square foot facility and ship throughout the world. Our knowledgeable team of UV-C specialists will provide effective and cost-conscious solutions for your home, business, industry, or institution.

Model AERO-24

Model AD24-2

GERMICIDAL ULTRAVIOLET

Germicidal Ultraviolet is a unique and rapid method of disinfection. It utilizes germicidal ultraviolet lamps producing ultraviolet wavelengths at 254 nanometers (nm)—a level that is lethal to bacteria, virus and other microorganisms.

An ever growing range of industries and consumer applications have found ultraviolet to be the ideal solution for their air and surface treatment needs.

Atlantic Ultraviolet equipment and systems are manufactured in the USA.

PRINCIPLE OF OPERATION

ADVANTAGES

Economical

System requires very little power to operate.

Safe

No risk of over-exposure.

Fast

Disinfects both air and exposed surfaces in seconds.

Easy

Simple installation and maintenance.

Automatic

Continuous disinfection without special attention.

Durable

Polished Stainless Steel and/or Aluminum.

Versatile

Numerous models available to handle various duct sizes and configurations.

Low Maintenance

Requires only annual lamp replacement and periodic cleaning.

AeroLogic® is primarily used for installation in new and existing HVAC (Heating, Ventilating & Air Conditioning) systems. The air that passes over the installed **AeroLogic®** is subjected to the rays from the germicidal ultraviolet lamp (or lamps). These germicidal rays destroy airborne microbes including bacteria, mold, and virus.

The **AeroLogic®** Air Duct installation presents centralized and non-intrusive applications that are useful on their own or in conjunction with additional air circulation and filtration technologies. When used together, these systems provide high level protection solutions.

The **AeroLogic®** design has been carefully conceived to provide adequate germicidal dosage for air stream or surface disinfection. The dosage, as it applies to ultraviolet disinfection, is a function of time, and the intensity, of ultraviolet wavelengths, to which the air stream or surface is exposed.

Our UV Application Specialists would be happy to perform the necessary calculations to ensure the model we provide is appropriate for your particular application.

Model ADHO24-4

AeroLogic® One Lamp Air Duct Model

Utilize the **AeroLogic® One Lamp Germicidal Ultraviolet Air Duct Disinfection System** in an HVAC system for reduction and/or elimination of the growth of bacteria, mold and spores, and to help control the spread of airborne cold, flu virus, and other airborne transmitted diseases.

The following information is required to size an ultraviolet system for duct air treatment:

- Duct or plenum size
- Length of compartment or duct where **AeroLogic®** is to be installed
- Air speed typically provided in CFM (cubic feet per minute)
- Approximate air temperature

With this information, an Ultraviolet Application Specialist can calculate the approximate contact time and lamp output required under these conditions and recommend the **AeroLogic®** model needed.

STER-L-RAY®

Germicidal Ultraviolet Lamp

Lamp is instant starting and provides the utmost in quality, sustained output and longevity. (See page 11 for more information.)

Construction

Designed for use in residential applications, the **AeroLogic® One Lamp Air Duct Model** is constructed of lightweight, anodized aluminum alloy. The anodized aluminum alloy offers an increased surface hardness, for durability, and corrosion resistance similar to that of stainless steel. This rugged construction along with a water-resistant power cord, rated for indoor/outdoor use, and liquid-tight cord grip all work to form a “drip-proof” assembly.

Surelite™ Ballast

State-of-the-art electronic ballast specifically developed for the operation of ultraviolet lamps. Versatile ballast provides high lamp output; is lightweight, efficient, and operates cool for longer life.

CRYSTAL CLEAR™ Quartz Sleeve

A unique feature of the **AeroLogic® One Lamp Germicidal Ultraviolet Air Duct Model** is the use of a specially designed quartz sleeve to protect and insulate the germicidal ultraviolet lamp. The quartz sleeve protects the ultraviolet lamp from deposits of dirt and/or dust while insulating it from low air temperatures and the cooling affects of high air velocities in the air duct, ensuring optimum ultraviolet output.

Steadfast™ Bayonet Socket Mount Lampholder

Bayonet Socket Mount four-pin lampholder fastens the lamp securely while providing convenient, “quick and easy”, lamp change.

Promate™ Observation Port/ Sight Glass Assembly and Mounting Hardware (included)

A Sight Glass Assembly allows for visual inspection of the lamp, without the need to remove the **AeroLogic®** from the duct (see page 5).

Mounting Hardware and Gasket - (included)

GENUINE **STER-L-RAY**® GERMICIDAL LAMPS

Relative Spectral Energy Distribution (Typical)

Germicidal Effectiveness As Related to Wavelength

STER-L-RAY® Germicidal Lamps are shortwave, low pressure tubes that produce ultraviolet wavelengths lethal to microorganisms. Approximately 95% of the ultraviolet energy emitted from **STER-L-RAY**® germicidal lamps is at 254 nanometers, the region of germicidal effectiveness most destructive to bacteria, mold and virus.

STER-L-RAY® Germicidal Ultraviolet Lamps are instant start lamps that utilize tungsten filaments. Lamp life is governed by the life of the filaments and is affected by the frequency of starting. **STER-L-RAY**® lamps are well suited for a variety of air purification applications, which require high ultraviolet intensity.

STER-L-RAY® High Output (HO) Germicidal UV Lamps are similar in size and shape to conventional germicidal UV lamps but are capable of operating at higher UV output. Atlantic Ultraviolet's Surelite™ ballasts have been extensively tested with **STER-L-RAY**® High Output (HO) lamps and are strongly recommended to achieve the best performance and longest lamp life.

STER-L-RAY® and the **STER-L-RAY**® logo are trademarks of Atlantic Ultraviolet Corporation.

CAUTION: Exposure to direct or reflected germicidal ultraviolet rays will cause painful eye irritation and reddening of the skin. Personnel subject to such exposure must wear suitable faceshield, gloves and protective clothing.
