UV/Visible Light/LED Curable Metal-Glass General Industrial Bonder

PRODUCT DESCRIPTION

Incure Uni-Weld™ 1203 UV/Visible Light/LED curable adhesive is a strong metal-glass bonder. High in clarity, it is an excellent choice for bonding of up to 5,400 PSI on many different metals/glass/ceramics on a single application. Incure 1203 exhibits very low linear shrinkage with enhanced excellent moisture and temperature resistance. High elongation and tough properties provides good passive vibration isolation capability. It is also ideal for applications that are subjected to repeated thermal cycle testing.

All tests for cured bonds should be carried out at ambient temperature. For safe handling of this product, please read Material Safety Data–sheet (MSDS) prior to use. Organic solvents, such as IPA, may be used to wipe away uncured material from surfaces.

EtO and GAMMA STERILIZATION (Not Applicable for this Product)

All Incure medical products are formulated to subject to standard sterilization methods, such as EtO and Gamma Radiation of 25 to 50 kGrays (cumulative). Enhanced moisture and thermal resistance of this product show excellent adhesion and bonding strength after one cycle of steam auto-clave test. Depending on bond design and structure of the application, users should test specific assemblies after subjecting them to sterilisation. Consult Incure Support Team for assistance, if your devices are subjected to more than one sterilization cycles.
